

HERCULES HITCH™

EXTREME DUTY, LOW PROFILE, PIN & LOOP STYLE

In an imperfect world, Henderson's Hercules Hitch is a perfect fit. This extreme duty, low profile, pin & loop style hitch was crafted with three "Must Have" criteria.

UNMATCHED STRENGTH

Our engineers focused on an enclosed design that would bolster the hitch's strength beyond the industry standard. This resulted in a clean, rock solid and functional design.

LOW PROFILE BUILD

Today's snow plow packages can be complex and quickly grow into your driver's line of sight. The Hercules Hitch combats this issue by delivering one of the lowest, if not the lowest profile in the industry.

Ready for Use

Stowed Position

COMPACT DESIGN

The last "Must Have" was creating a hitch that was compact. So compact, that you could leave it mounted to your chassis year round. In the stowed position, the Hercules Hitch folds down flush with the front end of the chassis. Eliminating seasonal hitch installs and uninstalls offers two clear advantages, a reduction in labor hours and extremely quick reaction times. Now you can spend more time on the road, battling the elements, not the equipment.

And don't overlook that fact that we've included grease zerks at every pivot point on the hitch. Greasable pivot points will save your employees from the old tug and pull drills, caused by rusting in place.

Henderson, we're leading the way through innovative snow and ice technology.

Consult your local Henderson Distributor for all available options.

Combination Bodies • Dump Bodies • Snow Plows • Snow Plow Wings • Underbody Scrapers
Anti-Ice Systems • De-Icing Systems • Sand & Salt Spreaders • Live Bottom Trailers • And more from...
